

Welcome to the latest version of Caliber 11.3

The Caliber 11.3 release introduces new product capabilities along with features pertaining to integrations, currency and language support.

Product Features

Caliber 11.3 continues to build on the Author, Visualize and Review capabilities. Here are some highlights of the new features:

Copy and paste Requirements with map to source

Caliber Author now connects the source requirement with the copied requirement when pasting with trace. This feature greatly simplifies the ability to centrally manage and reuse requirements across projects.

Double-click OLE objects

OLE objects can now be opened with a double-click as well as through the context menu.

Support for find keyboard shortcut in Requirements tree

Caliber Author supports the CTRL-F command to open the search capabilities in the Requirements Tree.

Change assigned fonts

Caliber Author provides a <DEFAULT> option in the font list under the Edit tab. By choosing the <DEFAULT>, users can quickly remove the explicit font that has been assigned to a requirement description. They can then switch the font back to the non-explicit or default that is determined by the Internet Explorer font options on the client machine.

Review usability updates

Several updates have been implemented to improve the user experience while using Review.

Product Integration Updates

Logon with Windows session credentials

Caliber now offers the option of using Windows session credentials to log onto Caliber Author and Review components. Caliber Author and Review users now have immediate access to Caliber via their existing Windows login session.

Borland Connect support

Caliber Author integration with Borland Connect expands our connectivity with other Agile tool vendors.

Document Factory improvements

Document Factory integration has been refined to ensure a better user experience.

Product Currency Updates

Support for Windows 8 and 8.1

Caliber and its components now support Windows 8/8.1 Pro/Enterprise, 32-bit and 64-bit.

Support for Visual Studio 2012

Caliber now integrates with Visual Studio 2012.

Support for Visual Studio 2012 Team Foundation Server

Caliber integrates with Visual Studio 2012 Team Foundation Server through the Delivery Tab and Traceability features in Caliber Author.

Product Language Support

Caliber Available in Chinese

Caliber Author, Document Factory, Import/Export Utility, HP Quality Center Publisher, Data Server, Visualize, and Review are localized for Chinese operating systems. The documentation remains in English, but is still available from the help menu or Start menu.

Caliber Author now supports English, Chinese, French, German and Japanese.

Caliber 11.3 went into general availability on 1/24/2014. Customers on support and maintenance can download the latest release from the Micros Focus SupportLine website.
